Flask App Deployment Report

Flask Model Deployment Report (Render Platform)

Name: Egbe Grace Egbe
Batch Code: LISUM43
Submission Date: April 6, 2025
Submitted To: Data Glacier Virtual Internship

Step-by-Step Deployment Documentation

Step 1: Project Preparation

Ensure the following files and structure exist in your project folder:

flask_student_score_predictor/

├── app.py

├── requirements.txt

├── Procfile

├── student_score_model.pkl

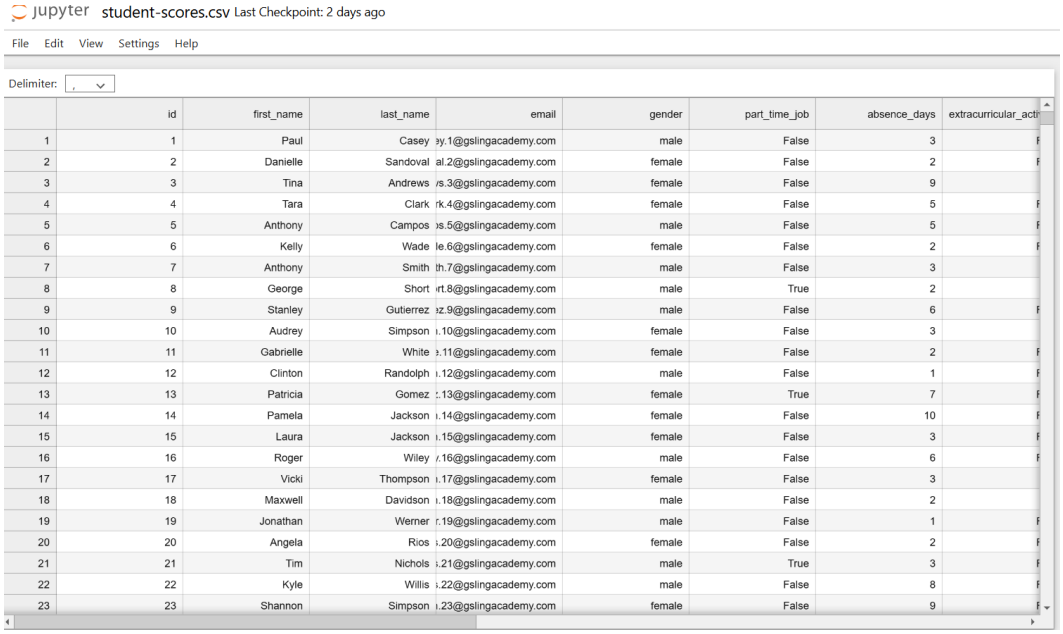
└── templates/

  └── index.html

- **app.py**: Flask app script
- **requirements.txt**: Contains all necessary Python libraries
- **Procfile**: Tells Render how to run the app (should contain: web: gunicorn app:app)
- **student_score_model.pkl**: Trained ML model
- **templates/index.html**: HTML frontend

This report documents the step-by-step deployment of a Flask machine learning web app for student score prediction. The deployment process includes setting up the project structure, preparing necessary files, Git initialization, and deployment to Render.

Step 1: Flask Project Folder Structure



jupyter student-scores.csv Last Checkpoint: 2 days ago

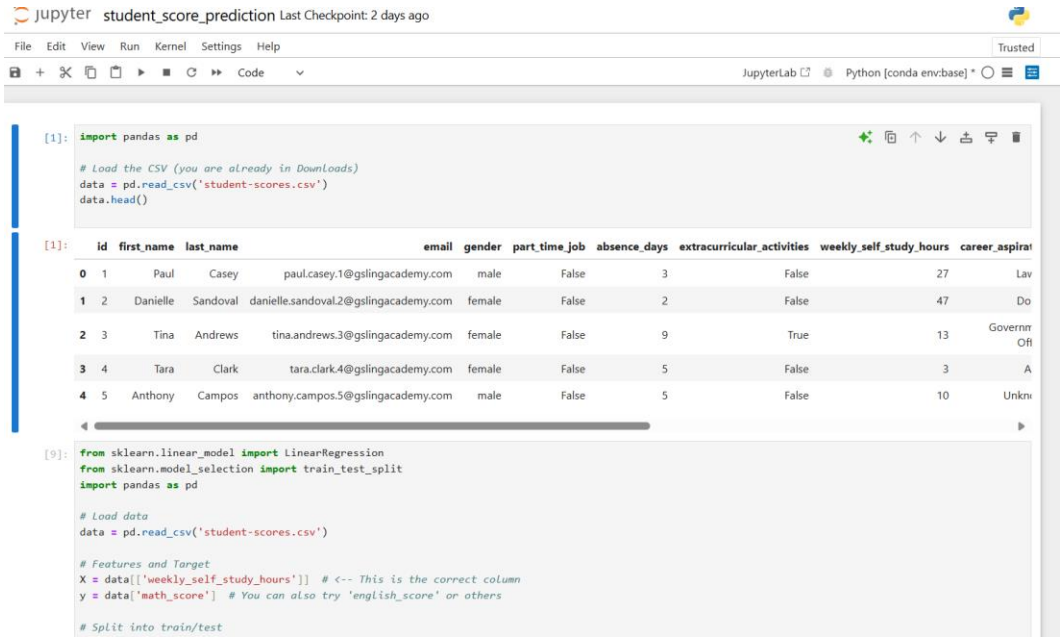
23	23	Shannon	Simpson	a.23@gslingacademy.com	female	False	9	F

Step 2: Creating requirements.txt and Procfile



jupyter student_score_prediction Last Checkpoint: 2 days ago

File Edit View Run Kernel Settings Help

Trusted

Code

JupyterLab Python [conda env:base] *

[1]:
```
import pandas as pd

# Load the CSV (you are already in Downloads)
data = pd.read_csv('student-scores.csv')
data.head()
```

[1]:

	id	first_name	last_name	email	gender	part_time_job	absence_days	extracurricular_activities	weekly_self_study_hours	career_aspirat
0	1	Paul	Casey	paul.casey.1@gslingacademy.com	male	False	3	False	27	Lav
1	2	Danielle	Sandoval	danielle.sandoval.2@gslingacademy.com	female	False	2	False	47	Do
2	3	Tina	Andrews	tina.andrews.3@gslingacademy.com	female	False	9	True	13	Governm Offi
3	4	Tara	Clark	tara.clark.4@gslingacademy.com	female	False	5	False	3	A
4	5	Anthony	Campos	anthony.campos.5@gslingacademy.com	male	False	5	False	10	Unkn

[9]:
```
from sklearn.linear_model import LinearRegression
from sklearn.model_selection import train_test_split
import pandas as pd

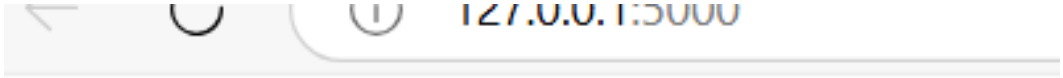
# Load data
data = pd.read_csv('student-scores.csv')

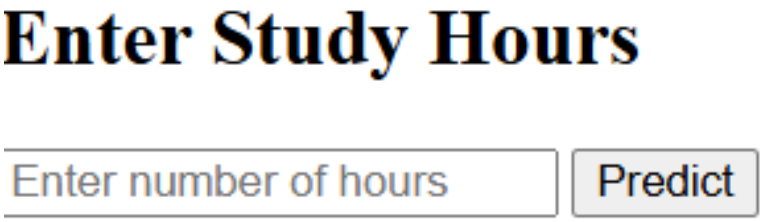
# Features and Target
X = data[['weekly_self_study_hours']]  # <-- This is the correct column
y = data['math_score']  # You can also try 'english_score' or others

# Split into train/test
```

Step 3: Flask App - app.py

Step 4: Templates Folder with index.html





Step 5: Git Initialization and Commit

jupyter index.html Last Checkpoint: 38 minutes ago

File Edit View Settings Help

```html
<!DOCTYPE html>
<html>
<head>
    <title>Student Score Predictor</title>
</head>
<body>
    <h2>Enter Study Hours</h2>
    <form action="/predict" method="POST">
        <input type="text" name="hours" placeholder="Enter number of hours" required>
        <input type="submit" value="Predict">
    </form>

    {% if prediction_text %}
        <h3>{{ prediction_text }}</h3>
    {% endif %}
</body>
</html>

```

Step 6: Deployment on Render

localhost:8889/edit/Downloads/app.py?

jupyter app.py Last Checkpoint: 2 days ago

File Edit View Settings Help

```python
from flask import Flask, request, render_template
import joblib
import numpy as np

# Load model
model = joblib.load('student_score_model.pkl')

app = Flask(__name__)

@app.route('/')
def home():
    return render_template('index.html')

@app.route('/predict', methods=['POST'])
def predict():
    hours = float(request.form['hours'])
    prediction = model.predict(np.array([[hours]]))
    return render_template('index.html', prediction_text=f'Predicted Score: {prediction[0]:.2f}')

if __name__ == '__main__':
    app.run(debug=True)

```
